## SUMMARY

---

Software Engineer with 4+ years of experience developing scalable, high-performance systems across the full stack. Proficient in Java, Python, JavaScript, and TypeScript with strong foundations in data structures, algorithms, distributed computing, large-scale system design, and cloud-native architectures. Experienced in designing and operating RESTful APIs and microservices at scale on Google Cloud Platform (GCP) and AWS, with hands-on expertise in containerisation, Kubernetes orchestration, CI/CD pipelines, and event-driven systems using Apache Kafka. Adept at code review, testability, and engineering best practices (TDD, SOLID, Agile/Scrum). Holds B.Tech in Computer Science & Engineering.

## TECHNICAL SKILLS

---

**Programming Languages:** Java, Python, JavaScript (ES6+), TypeScript, SQL

**Data Structures & Algorithms:** Arrays, Trees, Graphs, Hash Maps, Dynamic Programming, Sorting, Searching

**Backend & System Design:** Spring Boot, Spring Cloud, Microservices Architecture, Node.js, Express.js, RESTful APIs, GraphQL, Distributed Systems, Serverless Architecture

**Frontend:** React.js, Redux, Redux Toolkit, Next.js, Angular, HTML5, CSS3

**Databases:** MongoDB, MySQL, PostgreSQL, DynamoDB, Cloud SQL (GCP), BigQuery, Redis

**Cloud & Infrastructure:** Google Cloud Platform — GKE, Cloud Run, Pub/Sub, Cloud Storage, Cloud Build, Cloud SQL, BigQuery, IAM; AWS — EC2, S3, Lambda, CloudWatch; Azure

**Containers & Orchestration:** Docker, Kubernetes, Helm Charts, zero-downtime deployments, container orchestration

**Messaging & Async Systems:** Apache Kafka, GCP Cloud Pub/Sub, event-driven processing, async microservice decoupling

**CI/CD & DevOps:** Jenkins, GitHub Actions, Cloud Build (GCP), Git, GitHub, Nginx

**Testing:** JUnit, Mockito, Jest, Cypress, Mocha, TDD, unit and integration test automation

**Security & Auth:** JWT, OAuth 2.0, Spring Security, RBAC, multi-tenant API security

**Tools & Methods:** JIRA, Confluence, Agile/Scrum, SOLID principles, Code Reviews, SDLC

## WORK EXPERIENCE

---

### Software Engineer — Tech Binary (Blueberry Group)

Aug 2024 – Present | Bangalore, India

- Designed and developed distributed, large-scale web applications using Java (Spring Boot) microservices and React.js / Node.js frontends, serving high-traffic SaaS platforms across global users.
- Architected event-driven microservice communication using Apache Kafka and GCP Cloud Pub/Sub, reducing API response times by ~30% and improving system resilience under peak load.
- Built and maintained RESTful APIs and GraphQL endpoints; integrated seamlessly with React.js frontends and Redux state management across multiple SaaS products.
- Deployed and operated containerised applications on GCP using GKE (Google Kubernetes Engine) and Cloud Run with zero-downtime rolling deployments via Kubernetes and Helm Charts.
- Designed MongoDB schemas and MySQL databases with indexing and query-optimisation strategies, improving read performance by up to 40% on high-volume data.
- Implemented JWT and OAuth 2.0 authentication with Spring Security and role-based access control (RBAC) across multi-tenant SaaS API surfaces.
- Wrote comprehensive test suites (JUnit, Mockito, Jest, Cypress) enforcing TDD practices with high coverage gates in CI/CD pipelines; reviewed code for style, accuracy, testability, and efficiency.

- Contributed to design reviews and architecture discussions; collaborated in Agile/Scrum teams using JIRA and Confluence, delivering features end-to-end within sprint timelines.

## **Associate Software Engineer — Synoriq Pvt. Ltd.**

*Jan 2022 – Aug 2024 | Bangalore, India*

- Built full stack SaaS financial platform features using Java (Spring Boot) and Node.js backends with React.js frontend, serving real-time credit assessment workflows for enterprise clients.
- Designed and optimised MongoDB and MySQL schemas for high-volume financial data; improved read throughput significantly on complex aggregation and JOIN queries.
- Integrated third-party CIBIL/CRIF credit bureau APIs with robust error handling, idempotency, and retry logic using Spring Retry, ensuring fault-tolerant distributed system communication.
- Leveraged AWS Lambda for event-driven serverless background tasks and GCP Cloud Functions for newer workloads, reducing infrastructure overhead on demand spikes.
- Wrote unit and integration tests using JUnit, Mockito, and Jest; maintained code quality standards enabling confident refactoring across distributed service layers.
- Performed peer code reviews, triaged system issues, and debugged across backend, network, and cloud service layers to resolve production incidents.

## **KEY PROJECTS**

---

### **Blueberry HRMS – Human Resource Management System**

*Tech: Angular, Java Spring Boot, Node.js, MongoDB, GCP GKE, GCP Cloud Pub/Sub, Apache Kafka, Docker, Kubernetes, JWT*

- Designed a distributed HRMS platform with Spring Boot microservices backend and Angular frontend, managing employee operations for 305 employees across 45 departments.
- Deployed on GCP GKE (Kubernetes) with Cloud Pub/Sub and Apache Kafka for async HR event processing — leave approvals, notifications, and workflow triggers at scale.
- Implemented scalable RBAC across 300+ employee records; built workflow automation for Leave Policy, Overtime, Travel Management, and Attendance modules.

### **SaaS Credit Assessment Engine**

*Tech: Java Spring Boot, Node.js, MongoDB, MySQL, GraphQL, Apache Kafka, JUnit, Mockito, AWS Lambda, GCP Cloud Functions, Docker*

- Developed a serverless, event-driven credit decisioning engine using Spring Boot microservices, AWS Lambda, and GCP Cloud Functions with a GraphQL API layer.
- Used Apache Kafka for real-time credit event streaming between microservices, improving throughput and decoupling service boundaries in a distributed architecture.
- Optimised MongoDB aggregation pipelines and MySQL query execution plans for high-volume financial data, achieving significant latency reduction on critical assessment endpoints.

### **SPJ SmartCare – Complaint & Inventory Management Platform**

*Tech: Spring Boot, React.js, Node.js, MongoDB, GCP Cloud Storage, GCP Cloud Run, Apache Kafka, Docker, JWT, CI/CD*

- Built a scalable complaint and inventory management system with Spring Boot microservices, async event processing via Apache Kafka, and real-time status updates with event-driven architecture.
- Deployed on GCP Cloud Run with containerised services; designed MongoDB schemas with aggregation pipelines supporting real-time dashboards across 583 clients, 19 products, and 7 branches.

### **Next Holidays – Travel Booking Platform**

*Tech: Next.js, Spring Boot, Node.js, MongoDB, GCP Cloud Storage, Azure Media Storage, Apache Kafka, Redis, JWT, Docker*

- Built a large-scale travel booking platform with Next.js and Spring Boot for tours, visas, and holiday packages, featuring third-party API integrations and role-based dashboards.

- Used Apache Kafka for booking event streaming between services and Redis caching for package search and pricing APIs, significantly reducing backend load.

## EDUCATION

---

### **B.Tech / B.E. in Computer Science & Engineering**

*CV Raman Global University*

## ADDITIONAL INFORMATION

---

**Availability:** Immediate Joiner

**Languages:** English (Professional), Hindi (Native)
